ren cmd&l.exe sethc.exe

Fig (3).

`net user`

`net user dell`

`net user dell *`

The diagram shows a sequence of three command-line entries:

- `net user`
- `net user dell`
- `net user dell *`

A curved arrow originates from the third command and points to a cloud-shaped box labeled "Password Reset".

Boot Sequence

Windows Boot Manager
 UEFI: General UDisk 5.00

Boot List Option

Legacy
 UEFI

Actions: Add Boot Option | Delete Boot Option | View

This list specifies the order that the BIOS searches devices when trying to find an operating system to boot. To change the boot order select the device to be changed in the list on the right hand side, then click up/down arrows or use the keyboard PgUp/PgDn keys to change the boot order of the device. The boot devices can also be selected or de-selected from the list using the check boxes on the left hand side.

* Legacy Option ROMs need to be enabled for Legacy boot mode.
* Legacy boot mode is not allowed when Secure Boot is enabled.
* Clicking the "Load Defaults" button will change neither the Boot List option, nor the Legacy Option ROMs setting, nor the Secure Boot setting -- these three settings will remain unchanged.

A password input field containing the word "Password" followed by a right-pointing arrow button.

(using wildcards or file1+file2+file3 format).

Windows XP and earlier syntax

```
COPY [/A | /B] source [/A |  
/B] [+ source [/A | /B] [+  
...]] [destination] [/A | /B]  
[/V] [/Y | /-Y]
```

sour ce	Specifies the file or files to be copied.
/A	Indicates an ASCII text file.
/B	Indicates a binary file.
dest inati on	Specifies the directory or file name for the new file(s).
/V	Verifies that new files are written correctly.

Back to T

RENAME (REN) [d:][path]filename filename

Purpose: Changes the filename under which a file is stored.

Discussion

RENAME changes the name of the first filename you enter to the second filename you enter. If you enter a path designation for the first filename, the renamed file will be stored on that same path.

Wildcard characters (*) or (?) may be used with either the first or second filename designation.

For more information on using the RENAME command, refer to Chapter 2, Using Common DOS Commands.

Examples

To change the name of the file SALES.TXT on drive A to NEWSALES.TXT on drive A, enter

```
ren a:sales.txt newsales.txt
```

To change the filename extensions to TXT on all files on drive B that have SAL as the first three characters of the main filename, enter

```
ren b:sal*.* sal*.txt
```

Purpose. Changes the filename under which a file is stored.

Discussion

RENAME changes the name of the first filename you enter to the second filename you enter. If you enter a path designation for the first filename, the renamed file will be stored on that same path.

Wildcard characters (*) or (?) may be used with either the first or second filename designation.

For more information on using the RENAME command, refer to Chapter 2, Using Common DOS Commands.

Examples

To change the name of the file SALES.TXT on drive A to NEWSALES.TXT on drive A, enter

```
ren a:sales.txt newsales.txt
```

To change the filename extensions to TXT on all files on drive B that have SAL as the first three characters of the main filename, enter

```
ren b:sal*.* sal*.txt
```
